

Condair Ltd is committed to respect the global environment. We aim to improve and protect it and, otherwise, have a duty of care to minimise our impact on it. The policy encompasses global operations pertaining to humidification, services and air curtains.

The Management Team have established, approved and maintain an Environmental Management System which outlines policy, identifies requirements and monitors performance to ensure that the Company's commitment is carried out, regularly reviewed, and targets and objectives are set for continued improvement. We aim to:

- Comply with all relevant regulatory and legal requirements relating to the Environment, Health and Safety and other codes of practice, including protecting the environment
- Design and develop products, process and packaging in order to minimise our consumption of non-sustainable resources, and to recycle, reuse and reduce where possible, working towards 0% waste to landfill
- Minimise all forms of pollution including pollutants from service vehicles; using routing software for journeys, and work towards electric vehicles as preferred transport
- Eliminate unnecessary waste of materials, especially plastic and resources; to enhance and protect environmental performance
- Work towards reduction of carbon emissions through monitoring our carbon footprint and improve our contribution toward local ecosystems
- Develop and promote humidification and other products which will enable our customers to minimise or prevent their own adverse environmental impacts, especially on disposing of equipment to ensure the natural environment is protected from harm and degradation
- Educate and train and develop our staff, to raise awareness of good practice regarding environmental issues, to enable them to contribute to the Company's aims and apply good practice in their lives outside work;
- Maintain the Health and Safety of our employees, our customers, stakeholders and the general public through good working practice and design, by conducting activities in a manner which minimises potential risks;
- Contractors who work for the Company will be expected to follow Company standards and we will provide appropriate training to enable them to do this;
- Contribute to a secure, safer and sustainable future through the use of renewable and reusable materials wherever possible;
- A commitment to communicate this policy and good practice to all our staff, contractors and our customers, the community and general public and stakeholders. It is regularly reviewed and updated.

Condair Ltd is dedicated to the development of world-class products, sustainable solutions and excellent service. Responsibility for our impact on the environment is an intrinsic part of our business operations
