Improving productivity in printing and packaging

Controlling humidity is critical to the success of many printing and packaging processes. As a global leader in humidity control, Condair has helped production facilities worldwide manage humidity more effectively. This dedicated consultation gives you access to that expertise, with advice tailored to your production needs.

What will happen?

At a convenient date and time, a humidity expert will meet with you online to review your production hall, processes and environmental control. They will assess how humidity impacts your operation and identify where improvements could be made.

What will I get?

Alongside immediate advice during the call, you will receive a post-consultation report covering:

- Best practise humidity control for your processes and materials
- The required humidification load to achieve optimal operating conditions
- Recommended process changes, including zero-cost and costed options
- Estimated ROI for productivity improvements vs environmental control upgrades
